

We find ourselves at a time of constant new development and change. Especially last weeks, we at Viscom have seen several new developments: **on June 01, our new Executive Board**, with Carsten Salewski und Peter Krippner as recently appointed new board members, commenced operations to further the existing Viscom success strategy with reinvigorated drive. At the same time, our company co-founder **Volker Pape** has moved to the Supervisory Board, which is also acting in a new constellation.

Our **new 3D AOI system S3088 *ultra chrome DT*** sets an important milestone for continued growth in the international SMT market. It enables time-optimized 3D inspection for double-track operation. Developed for highly efficient large-series production of demanding PCBs, the highest throughput and exceptional inspection depth of this economic in-line system fulfill even complex inspection tasks.

Our technical article about the topic "Industry 4.0 networks component inspection" brings you a further look into the future of the Smart Factory. Find out more about interlinked inspection results, data exchange and complete traceability with big data for sustained defect prevention.

These and many other exciting topics about our newest product and company developments are presented in our latest **newsletter**: <https://www.viscom.com/europe/pressschedule/downloads/#shortlink494-3>

We hope you enjoy informative and interesting reading
